

GERMAN DELEGATION

S/TP
COCOM DOC. 3478
Paris, April 6th., 195951
64MEMORANDUM BY THE GERMAN DELEGATION
ON THE EXPORT TO POLAND of 1 VOLTMETER

428834

The German authorities have received an application for the export to Poland of

1 Voltmeter, type Rel U 13 a, with two crystal diode measuring probes of the types Rel 3 U 96 and Rel 3 U 97;

the latter being covered by item no. 1529 a) ;
total value of the equipment \$ 1054.-

The voltmeter alone is a detector amplifier, priced at \$ 872.-, which serves - when without the measuring probes - for the detection of small direct potentials and is not embargoed.

The two crystal diode measuring probes ordered together with the amplifier, however, provide for alternating voltage measurements at a frequency range from 10 to 5000 mc/s. They are connected to the amplifier from the outside. Their value is \$ 182.-

By these two additional measuring probes which are covered by item 1529 a), the voltmeter can be employed for the various measurements on receivers and transmitters in the VHF and UHF bands.

The Polish authorities which have placed the order, state that the equipment will be used by the Warsaw Television Company, Warszawskie Zaklady Telewizyjne, for the detection of small alternating potentials at television-transmitting-installations in band 1 (47 to 68 mc/s) band 3 (174 to 216 mc/s) and band 4 (470 to 582 mc/s).

Assurances against reexport and transshipment have been received.

In view of the civilian enduse and the special policy adopted by the Committee towards Poland, the German authorities propose to grant the license for the equipment and trust, that no objections will be raised in the Committee against this export. The German Delegation would appreciate to have the views of governments at an early date.

~~CONFIDENTIAL~~
